

BLACKOUT

DEFENSIVE MICROBIAL TECHNOLOGY

Blackout is a unique blend of microbes and enzymes which are target specific. They aggressively compete for algae food sources and aggressively assist in the breakdown of surface residue left by algae proliferation.

- **Apply to Existing & Problematic Algae Areas**
- **Effective in High & Low Temperature Conditions**
- **Performs in Aerobic & Anaerobic Conditions**

Blackout should ideally be applied in conjunction with aerification and after a quality soil penetrant such as **Pervade**. Managing excess moisture is the key cultural practice to focus on for the prevention of surface algae.

PROFESSIONAL USE GUIDELINES

3

APPLICATION: Apply with any equipment that delivers an even coverage to the targeted area. Ideally, **Blackout** should be watered in within 6-12 hours.

RATE OF APPLICATION: Apply 16-24 fl oz / 1000 sq ft (50-75 L/ha) every 2-4 weeks.

COMPATIBILITY: **Blackout** will mix successfully with virtually any product that will mix in local water supply; however, **Blackout** should never be mixed with pesticides (i.e., fungicides, insecticides, herbicides, nematicides, etc.) or nutritional components containing high levels of copper.
