EVOLUTION-SP

EVERY ESSENTIAL AMINO ACID

Evolution-SP is a new and improved proprietary formulation of concentrated amino acid proteins and carbohydrates fortified with plant enzymes, vitamins, and plant sugars for soil application.

- Aerobic Soil Activity
- Enhances Microbial Function
- Natural Enzymes
- Plant Energy
- Improves Plant Strength

Aerobic soils improve soil function and microbial proliferation creating an environment for ongoing improved plant health.

PROFESSIONAL USE GUIDELINES

5

APPLICATION: *Evolution-SP* should be thoroughly dissolved and dispersed in the spray tank prior to the addition of other spray components. In some instances it may be desirable to pre-mix (slurry) in a separate vessel prior to the addition to the spray tank. Lightly water in. When thatch accumulation is a consideration, material must be watered enough to pass through thatch to the soil. A pre-application light spiking of the thatch layer is recommended.

RATE OF APPLICATION: Apply 6 lb (4 containers) / acre (5.6 kg (8 containers) / ha) every two to three weeks during the active growing season. Recommended during stress periods, "grow-in", overseeding, and immediately after aeration or spiking.
