# HIGH FIVE

SUPERCHARGED FLORATINE TECHNOLOGY

**High Five** is an enhanced phytochemical engineered formula for (C4) warm season grasses such as Ultradwarfs, common and hybrid Bermudas, Paspalum, Zoysia, and St. Augustine. **High Five's** natural fermentation extracts maximize growth and development by encouraging:

- Rapid Lateral Growth
- Optimum Grow-in & Establishment
- Superior Density & Rooting
- Quick Recovery & Transition

**High Five** must be used under the technical guidance of Floratine's Technical Services department (techinfo@floratine.com) for application rate(s) and usage guidelines. This formula is a highly advanced agronomic specialty use tool and therefore requires caution.

maximum growth

## PROFESSIONAL USE GUIDELINES

3

### NUTRIENT CONTENT

Sulfur (S) . . . . .	2.00%
Iron (Fe) . . . . .	3.00%
Manganese (Mn) . . . . .	2.00%
Zinc (Zn). . . . .	0.50%

Derived from ferrous sulfate, manganese sulfate, and zinc sulfate.

Also contains other naturally occurring fermentation materials, antioxidants, and amino acids.

Net Weight: 9.49 lb/gal (1.137 kg/L)

Rate of Application: 1.5-3.0 fl oz / 1000 sq ft (5-10 L/ha) every 7-10 days.
