MAXIPEX PELLETS

PELLETIZED HUMIC ACID

Maxiplex Pellets are a concentrated liquid humic acid that can provide multiple benefits for problem soil conditions. The complexing action of *Maxiplex Pellets* can decrease nutrient tie-up and promote availability of nutrients otherwise unavailable for plant uptake.

- Increases Nutrient Availability
- Improves Microorganism Activity
- Increases Exchange Capacity
- Improves Water Availability
- Chelates Micronutrients

Maxiplex Pellets assist when:

Heavy clay soils develop compaction which leads to nutrient tie-up, uneven moisture availability, restricted root penetration, and insufficient oxygen.

High sand content soils are characterized by excessive nutrient and moisture leaching, low cationic exchange capacity, low organic activity, and localized formation of “hot spots” and algae.

PROFESSIONAL USE GUIDELINES

ACTIVE INGREDIENTS

Humic Acids 4.80%

Net Weight: 12 x 0.5 lb (227 g) pellets

Rate of Application: Maxiplex Pellets will dissolve at different rates depending on water pressure, chemistry, temperature, and flow rate.
