# PHLEX-MAN

## FOLIAR MANGANESE SUPPLEMENT

*Phlex-Man* is a liquid foliar product designed for use on turf where tests have confirmed a lower desirable concentration of manganese. Foliar applications will provide immediately available manganese to the plant especially when applied with our **Power Plant** products to enhance:

- Stress Resistance
- Color
- Enzymatic Functions

Manganese, which is typically low in golf course soils, is critical to stress tolerance. Manganese plays a central role in several reactions required for synthesis of phenolic compounds used for defense mechanisms.

### PROFESSIONAL USE GUIDELINES
