PROPEL

LIQUID SOIL CATALYST AND PENETRANT

Propel is a concentrated liquid humic acid and superior soil penetrant providing multiple benefits for problem soil conditions. The complexing action of *Propel* can decrease nutrient tie-up and effectively move excess water.

- **Increases Nutrient Availability**
- **Infiltration**
- **Increases Exchange Capacity**
- **Improves Water Movement**

Heavy soils develop compaction which leads to nutrient tie-up, uneven moisture availability, restricted root penetration, and insufficient oxygen. *Propel's* powerful cationic exchange capacity flocculates clay particles and conditions soils for assisting with these issues and other factors limiting the healthy functioning of soils.

PROFESSIONAL USE GUIDELINES

6

NUTRIENT CONTENT

| | |
|---|-------|
| Proprietary Blend of Humic Acids and | |
| Di-Sulfosuccinate Surfactants | 7.30% |

Net Weight: 8.18 lb/gal (0.98 kg/L)

Rate of Application: 3-6 fl oz / 1000 sq ft (10-20 L/ha).
Maximum benefit will be obtained when used during aerification.
